

Boolean Logic for Babies (Computer Science for Babies Book 1)

The first Computer Science for Babies book introduces the developing mind of a 0+ month old to Boolean Logic, the underpinning of all of computer hardware and software. This cloth book is soft and machine washable that is safe for babies to chew on, with a teething ring and velcro loop. Long before a child can program the next blockbuster app, they should understand Boolean Logic. Boolean Logic is built on the primitives AND, OR, and NOT. This book is structured like many other baby books, with colorful pictures and animals. But each set of pages also shape a baby's brain to comprehend conjunctive objects (AND), disjunctive options (OR), and logical negation (NOT). This book will help form the very basic concepts that underly all of computer science, and place your baby on a path to understand and control the world of computers.
