

## Navigating Cyberspace (Safety First)

The Internet is a great tool for learning. Its also a lot of fun for games, keeping up with friends, or reading about the things you love. But there are also dangers on the Internet. You cant always know for sure to whom youre talking. Information you put online that you think is safe may become a target for people who are up to no good. Pictures you share with one person can end up in the hands of people youd never have sent them to. The Internet can become a scary place.
